smiles made in switzerland

## **A clear winner**

effective, appealing, comfortable

# A brand new aligner system

innovative, user-friendly, precise

As a dentist, you face stiff competition. Perhaps the best way in which you can respond to this situation is by expanding your range of treatment options: with an innovative aligner system that can easily be integrated into your practice.

Today, an increasing number of patients realise and stress on the importance of healthy, attractive and straight teeth. As a dentist, you can expand your treatment options to cater fully to these demands. The nivellipso aligner system offers your practice several options to treat various class-

es of orthodontic malocclusion easily and effectively. The innovative system developed by Switzerland's first aligner manufacturer, nivellmedical AG, is ideally suited even for beginners and delivers accurate results – without any need for additional aids or attachments.

# The three main features that distinguish nivellipso from other aligners are:

## Use of materials with maximum transparency

---

Our aligners are made of **bio-compatible** polyethylene terephthalate glycol (PET-G), a thermoplastic with exceptional properties in terms of durability, elasticity and dimensional stability. Owing to its **excellent biocompatibility**, PET-G is ideally suited for all indications pertaining to orthodontic aligner treatment. During the manufacturing process, our main focus is on achieving the **highest level of transparency**. This ensures that nivellipso is a product which is **particularly discreet** and aesthetic when worn by the patient.

## Exceptionally effective design

---

In contrast to other aligner systems, nivellipso aligners cover a **portion of the gingiva and also use the area presented by the interdental spaces**. This concept helps achieve an exact fit, improved retention results and a **more efficient transfer of pressure**. This ensures that the aligners **fit perfectly** and function **efficiently – without any need for additional aids or attachments**.

## Innovative 3-splint system

---

In each treatment phase, **three splints with different material thickness** (soft, regular, intense) are used. The combination of the **special design** that uses the entire available tooth surface and the **3-splint system** ensures a **constant transfer of pressure** and improves wear comfort. The teeth are moved **gently and carefully – yet very effectively –** into the desired position.

# Keep it simple

minimum effort, maximum service,  
quick results

With nivellipso, you can easily expand your range of treatment solutions. Treatment processes with our virtually invisible, maximum-transparency aligner system can easily be integrated into the everyday workflows of your practice. To make this happen, our team of orthodontic experts support you and your staff and are available for you around the clock – personally, via our service hotline and online.

## Treatment with nivellipso involves the following steps:

### **Step 1: Assessment in the practice**

To begin, create a plaster model of the upper and lower jaw impressions and send it to us. If you are using an intraoral scanner, directly load the scans (open STL files) onto nivellonlign – our in-house platform for treatment planning.

### **Step 2: Treatment planning made easy**

Our treatment planning software is user-intuitive and the mandatory fields for a customised treatment plan have deliberately been reduced to the essentials. We check the documents provided by you to ensure that they are complete. This guarantees 100% planning security.

### **Step 3: Consultation and approval**

Upon completion of the planning stage, you will receive a detailed treatment proposal that includes the relevant information on the duration, course and cost of treatment. This constitutes the perfect basis for personally discussing the case with your patients.

### **Step 4: Commencement of treatment**

Upon obtaining your approval, we shall begin with the fabrication of custom-made aligner sets which you will receive in your practice after approximately two to three weeks. For your initial treatment plans, we shall also be pleased to provide advice and support personally at your practice.

### **Step 5: Scheduled course of treatment**

Every set consists of three splints with different material thicknesses (soft, regular, intense) and each set is to be worn by the patient for a period of one week. We recommend monitoring the dental status of your patient at regular intervals to ensure optimum treatment progress and perfect oral hygiene.

### **Step 6: Retain the results (retention)**

We advise you to recommend retention measures to your patient to ensure that the teeth that are optimally aligned in the dental arch with the help of nivellipso are also maintained in this new position throughout the patient's lifetime. Our special retention splints that can be worn at night are especially suited for this purpose. Alternatively, fixed/bonded retainers can also be considered. We will be pleased to advise you about all aspects.

# Mission possible

one single aligner system,  
unlimited treatment options

nivellipso aligners are ideally suited for the treatment of virtually all kinds of malocclusion and for almost all age groups. With the help of our experts, implementing the virtually invisible method for straightening teeth is easy even for beginners. We would be pleased to be of assistance.

## The following indications are best suited for gaining initial insights:

### **Crowding/tilting**

A misalignment of tooth widths and spacing frequently leads to occlusion involving crowded or tilted teeth. This obviously has a negative impact on the bite and the patient's appearance – a typical case of crooked teeth that can easily be treated with nivellipso.

### **Closing/opening of gaps**

Excessive space in the upper or lower jaw or extractions lead to unattractive gaps that affect the patient's appearance. Such cases can, however, be treated easily with nivellipso. Moreover, our nivellipso aligners also help you to create a gap that may be required for prosthetic restoration.

### **Cosmetic correction**

Slight to moderate cases of malocclusion in the anterior region can be treated very easily with nivellipso. Our dental splints are also ideally suited for treating relapse or for follow-up treatment.

**More complex cases:** In general, nivellipso is also suited for treating more complicated cases involving crossbite, overbite and prominent overbite/overjet. Depending on the complexity of each individual case, however, this may require greater orthodontic expertise. Our experts will be pleased to advise you on whether a particular case is suited for treatment in your practice – all you have to do is give us a call!

# Your personal support system

comprehensive advice,  
competent support

An aligner system can only be profitable for you if it is seamlessly integrated into the workflows of your practice. To ensure this, our comprehensive service offer and competent contact partners at our end are at your service to provide professional and targeted solutions. Our support team is made up of orthodontic specialists who are available for you around the clock and who look forward to your queries and assisting you – on phone, personally at your practice or online.

## An overview of our services:

- Expert support: on phone, online or personally at your practice
- User-friendly, proprietary treatment planning platform
- Express service: Orders and deliveries within 14 days following submission
- Creation of plaster models based on impressions (silicone or polyether)
- Scanning of plaster models and archiving (also permanently, if required)
- Creation of new models (per 3D model) from the archives for documentation
- Fabrication of application splints (orders can be placed for more than one splint)
- Preparation of pontics for closing/opening gaps
- Fabrication of custom-made attachments (if required for a specific case)
- Preparation of aligners for the implementation of Class 2 elastic bands
- Delivery of a special, super-soft corrective splint if treatment plan is not implemented
- Return of plaster models and/or impression trays

# Become a nivellipso user and join the team of winners.

Take this opportunity to expand your range of treatment options by including an innovative product that will impress you and your patients. Treatment with nivellipso is an additional asset in your cosmetic treatment portfolio. Easy to use and, with our team of experts to support you personally, nivellipso can be integrated seamlessly into your practice workflows.

**We will be pleased to advise you.**
